

### Mahtomedi Tree Preservation and Replacement Plan

Please complete this form if the project involves the removal of any significant trees (8" in diameter for deciduous tree or 6' in height for coniferous trees), or construction activities near the critical rooting area of any significant trees.

1. On a copy of the site plan, please indicate the following, including species and diameter at breast height:
  - Any significant trees to be removed
  - Any significant trees to be protected
2. Describe protection measures (on site plan or below), INCLUDING: designated tree preservation zones, specify fence type, duration of fencing as well as entry restriction measures to be taken and signage. *Trees on adjacent properties that may be impacted should also be included.*

---

---

---

3. Provide number and species of replacement trees. (Recommended species list on back). Replacement trees must be at least 2 ½-caliper inches for deciduous trees and at least 6 feet tall for coniferous trees. Replacement trees will be required at 1:3 for a wooded area or 1:1 for a non-wooded area (determination to be made by City Forester).

---

---

---

---

4. Approximate timeframe for replacement trees to be planted:
